

MERN ==> MongoDB

Application running locally ==> Migrate it to cloud

Full Stack Application(3 parts)

Front End ==> React App ==> Locally ==> Deployed ==> S3 bucket

Back End ==> Node.js and Express.js ==> Locally ==> Deployed ==> EBS

Database ==> MongoDB ==> Locally ==> Deployed ==> (MongoDB Atlas)

Data Migration Service ==> Database(AWS)

This service migrated the data to the AWS Databases(RDS) ==>

MySQL,

RDS

AWS Serverless Event Management Project:-

Event Registration form

cusname: -----
ename: -----
etime: -----
email: -----

API Gateway

AWS Lambda

DynamoDB

AWS Cloudwatch

SES(Simple Email Service)

Customer MailID

1) We need not manage any servers(not create any EC2 instance)

2) Pay as you go ==> Charged only for the execution time, not for the idle time

2) For longer tasks EC2 is preferred, and for shorter tasks AWS Lambda is preferred

EBS ==> Not serverless

EBS ==> Background(servers, Auto Scaling,

AWS Lambda ==> Serverless

No requirement of any server, Code runs on demand, Auto scales that function, Pay only when the function runs

AWS Lambda ==> function ==> keep our code

0.20\$ for 1 million requests ==> 17 INR

t3.large ==> 1hr ==> 8 INR ==> 200 INR ==> 6000 INR

EC2 ==> Hotel Room ==> pay the bill for that entire day

AWS Lambda ==> Rooms ==> nap for 1 hr ==> 100 INR
